

OTHER INFORMATION

Budapest, 3 October 2019

The district heating season has started

After the planned annual reviews and summer maintenance works, PannErgy's two significant geothermal energy production facilities, the Geothermal Systems of both Miskolc and Győr—in line with previous years—are making their maximum capacity available for the Company's clients to meet increased demand for heat in the heating season.

Pursuant to legislation, the heating season starts on 15 September and finishes on 15 May. Based on the Operating Agreement made with the communities of residents, service providers automatically start district heating services on 15 September in case the mean outdoor temperature remains under 10°C for 1 day, or under 12°C for three consecutive days. The communities of residents may ask for deviation from the date of the automated startup of heating in case all the condominiums belonging to specific district heating center submit a written notice to this end to the district heating service provider.

In line with the foregoing, district heating services for the heating season of 2019 / 2020 was started by the service provider in Miskolc, MIHŐ Kft. and by the service provider in Győr GYŐR-SZOL Zrt. today. In relation to district heating services, further up-to-date information are available at the websites of the respective service providers: www.miho.hu and www.gyor-szol.hu.
